

NISSAN RELEASES CONCEPT SKETCH OF LIGHT COMMERCIAL ELECTRIC VEHICLE

Nissan Motor Co., Ltd., has released a concept sketch of a light commercial electric vehicle based on the newly launched NV200.

The low-cost multi-purpose vehicle would allow ambulance drivers to drive directly into the hospital or van and taxi drivers to enter urban areas where CO2 emissions are restricted. The van is one of four electric vehicles Nissan has announced for the future. At the 2009 Tokyo Motor Show, Carlos Ghosn, president and CEO of Nissan, said LEAF - the world's first affordable EV - will be launched in Japan, the US and Europe in late 2010 with global mass-marketing efforts to begin in 2012.

At the show, Ghosn also announced plans to release a four-seater Infiniti electric compact car, as well as LandGlider, a totally new concept which combines the best of two- and four-wheel vehicles.
